Explanation of UML diagram.

In the above UML diagram, at the topmost level there is CMS which stores the data of who owns the software. Then, there are System User's which have subclasses such as Admin, Teacher and Student. The Admin, Student and Teacher have their username and password and all of them can perform specific tasks. The admin can do CRUD operation on Courses and Teacher and also can publish the report after the Teacher have marked the result. Similarly, the Teacher can add assignments and give marks to the assignment done by the student. The student is able to submit the assignment and also available to view the report after the admin have published the report.

In above UML diagram, the student have been divided into different Levels. In order to register into the system, the student can fill a registration form.
